

Metinvest-SMC expands steel processing service

Metinvest-SMC, Metinvest Group's retail sales network in Ukraine, installed cutting and slitting line for processing uncoated and galvanized steel coils.

The new equipment will produce cut-to-length products to meet the demand for non-standard sized sheet and strip of sizes required by buyers. The new line can cut coils to strip with the thicknesses from 0.5 to 3 mm and widths from 50 mm and to sheets with length from 500 mm to 6 m.

The new flat product processing equipment was installed at the company's service metal centers in Kyiv and Dnipropetrovsk and can rapidly meet customer needs in all Ukrainian regions.

The scope of use of products generated as a result of coil processing is virtually unlimited. Sheet and strip are used as a raw material for the production of stamped goods; for the production, packaging and transportation of steel goods; for the production of profiles for installing plaster boards; for the reinforcement of profiles for plastic windows and for forging.

"Customer service improvement is only possible by thoroughly learning customer needs and developing new technology. Implementing new services demonstrates our willingness to develop in line with the needs and expectation of our clients," said Albert Avanesov, General Director of Metinvest-SMC, LLC.
