

Khartsyzsk pipe plant purchased the fire tanker for emergency service of the city of khartsyzsk

Khartsyzsk pipe plant (a part of Metinvest Group) purchased the fire tanker “KAMAZ” for Emergency Service of the city of Khartsyzsk totaling to more than 1 mln. UAH under the agreement about the social and economic cooperation with Khartsyzsk city council.

A new tank-car (“KAMAZ” make) has some advantages over the standard fire-engines. Its main advantage is that this is the cross-country car which will be able to arrive swiftly even to the most hard-to-reach site of the fire. Also among its advantages is the eight tons water storage (the water storage of the usual car - 2 300 tons). Not all populated places have the opportunity to renew the water storage, and a new car can fight a fire without renewal. This advantage is highly sought in conditions of the anomalous high temperature which is observed for some time past in summer that creates a fire dangerous situation and interruptions of water.

The car package includes 40 items of the fire-technical equipment, including hydraulic rescue instrument, which enables to conduct rescue operations in addition to operational fire fighting.

If necessary, the new car will be used to render assistance in such towns as Shakhtyorsk, Makeyevka, Donetsk.

"At the heart of our cooperation with the town there is one of the key principles of Metinvest Group CSR policy, namely improvement of quality and efficiency of the social and investment activities of the company. The system cooperation of “KHTW” with local communities is based on principles of partnership and transparency, and mainly focused on the development of town infrastructure, maintenance of the town target programs, improvement of the social climate, care of plant workers and residents of the town ", - said Acting Director General of PJSC "KHTW" Yuriy Zinchenko.
